

Palmetto Products Pipe Line LLC

a Kinder Morgan company

Palmetto Project Fact Sheet

- Kinder Morgan proposes the Palmetto Project, which is designed to transport gasoline, diesel and ethanol from Baton Rouge, Louisiana; Collins and Pascagoula, Mississippi; and Belton, South Carolina, to markets in North Augusta, South Carolina; Savannah, Georgia; and Jacksonville, Florida.
- Palmetto is supported by long-term commercial commitments from multiple customers. The proposed pipeline will have a design capacity of up to 167,000 barrels per day and will consist of a segment of newly constructed expansion capacity that Palmetto will lease from Plantation Pipe Line Company between Baton Rouge and Belton. A new 360-mile pipeline from Belton to Jacksonville would also be constructed as part of the project.
- Additional facilities, including product storage tanks, pump stations and delivery terminals, will be constructed as part of the Palmetto Project.
- The approximately \$1 billion project will generate approximately 1,200 temporary construction jobs at its peak and an estimated 28 permanent full-time positions. The estimated annual revenue to state and local taxing bodies from this project will be over \$14 million when completed.
- A number of federal and state agencies will be involved in the approval and oversight of the project, including the U.S. Army Corps of Engineers, South Carolina Department of Natural Resources, Florida Department of Environmental Protection and the Georgia Department of Natural Resources.

Estimated timeline

- Stakeholder outreach – Ongoing
- Begin construction – January 2016
- Project is placed in service – July 2017
